```python
from random import randint

humidity=randint( 0,350 )+1
temperature=randint( -350,350 )+1
if humidity>100:
        print( "humidity high" )
        if temperature>100:
                print( "temperature high" )
```
